Custom Printing

AndFel Corporation prints security seals in-house with fast turnaround times. Seals can either be printed by hot stamp or by thermal transfer. Numbers and text can be printed by hot stamping, or logos and graphics can be done with a custom plate. Thermal transfer allows for more printing options with less print time. There is no minimum and we offer price breaks by quantity. Please call if you would like more information.

Tag Attaching

Fastener Characteristics

**Paddle** - The most commonly used shape for garment tagging applications. Its larger end, the paddle, is designed in a way that once applied it will not come back through the hole in the tag. It also gives the consumer a larger surface to hold and pull when removing.

**T-End** - More discreet than the paddle fasteners, T-Ends are used for tagging, pairing products and packaging.

**Hook** - Mostly used as a mini-hanger for soft goods, such as caps, socks, gloves and scarves.

**Loop** - Both ends of the fastener are consecutively fired through the tool so they anchor at two different points and the filament serves as a loop. They are commonly used to hang goods, pair materials or secure labels.

**Buttoneer** - The fastener’s rivet shaped head makes it ideal for securing rubber and other elastic materials.
### Micro Fasteners

For use with tools 11040 and 11045.

Made of Nylon.
